# INSURESHIELD® SHIPPING INSURANCE

## Technical Implementation Reference Guide

# Overview

### 1.1. APIs

The acronym "API" stands for "Application Programming Interface".

APIs in their simplest form allow the transmission of data. APIs are an industry standard interface designed for external/internal software programs to accomplish specific tasks, usually for retrieving or modifying data in applications. In more advanced approaches, APIs are deployed to deliver streaming video, audio, and telephony services via smartphones, televisions, or internet-enabled kiosks.

The most popular approach to APIs is the open-data movement. Using APIs, data owners can easily expose information from data silos, allowing public or private access to large and small datasets.

UPS Capital APIs provide methods to interact/perform operations on their client transactional data within the UPS Capital network.

Programmers use the APIs to make interactive applications, websites and other projects. These programs will talk to the UPS Capital IT systems over industry standard network protocols. APIs are built using existing web technology, specifically the HTTP/HTTPS protocol that the World Wide Web employs to deliver content around the globe.

We conform to the design principles of Representational State Transfer (REST). Typically, we use a RESTful design for our APIs. The concept of REST is to separate the API structure into logical resources.

We use the HTTP methods GET, DELETE, POST and PUT to operate with the resources.

- Methods to retrieve data from the API require a GET request.
- Methods that create data require a POST request.
- Methods that update data require a PUT request.
- Methods that delete data require a DELETE request.

The API presently supports the JSON format only.

APIs require a particular HTTP method to return an error response if the request is not made with the correct payload (aka input).

### 1.2. Getting Started

The first step is to ensure all the contractual agreements between UPS Capital (UPSC) and the new Channel Partner (CP) are completed. Once the agreements are finalized, the UPSC IT API integration team will setup a sandbox environment for the new Channel Partner with sample rates to enable the API interactions. The CP IT team will reach out to

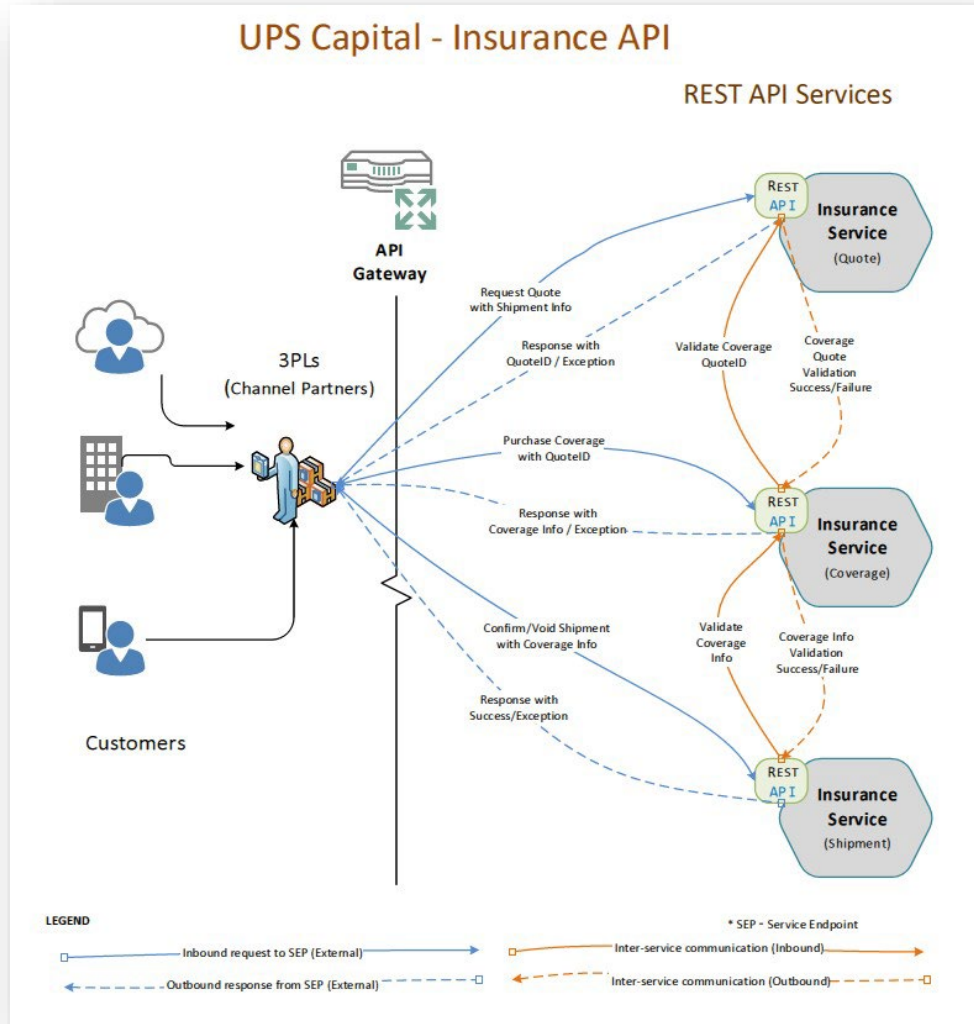

the UPSC API team for user credentials and other information for enabling secure REST API- based interactions with UPS Capital IT systems.

### 1.3. Security / Authentication

UPS Capital APIs use secure JWT tokens for service authentication. Any calls to the REST API endpoint should be made bearer tokens in the request headers in addition to using the secured JWT tokens provided by the UPS Capital API Integration team.

During the customer onboarding process, the customer procures a unique Secure Token with certain customer credentials generated by the API Integration team for enabling communication between provider (UPS Capital) and consumer (Customer).

### 1.4. Insurance Service Workflow Overview

InsureShield®  
Shipping Insurance  
by UPS Capital

# INSURESHIELD® SHIPPING INSURANCE

## Technical Implementation Reference Guide

# Insurance Service - APIs

## 2. Insurance Service - URLs

UPSCapital Insurance Coverage API

The API's purpose is to allow customers to get quotes and purchase insurance coverage for safe and timely package/cargo delivery. This API also helps to confirm or void insurance transactions for the respective shipment.

### 2.1. Create Quote

Customer's request for a new insurance quote by providing the necessary shipment information.

#### Post

**<https://upscapi.ams1907.com/apis/list/quote/v1>**

This method creates a quote in the system for insurance coverage.

#### Request

##### Request Parameters

**body \* (required)**

Quote object needs to be sent to the API as a request payload...

##### Request Headers

**Content Type** : application/json

**Bearer** : < secure token issued by API integration team >

##### Model :

##### Quote

```

{
  "productId": "String",
  "locationId": "String",
  "transactionID": "String",
  "partnerId": "String"
}

```

<b>productId</b>	<b>String</b> <b>Required</b> Indicates Product Id value assigned by UPS Capital, by default 1 for Channel Partners
<b>locationId</b>	<b>String</b> <b>Required</b> Indicates the Id Channel Partner assigns to their customer
<b>transactionID</b>	<b>String</b> <b>Required</b> Indicates a unique identifier of the customer transaction from the Channel Partner IT System
<b>partnerId</b>	<b>String</b> <b>Required</b> Indicates Partner Id, assigned by UPS Capital to the Channel Partner ex: XXX001

# INSURESHIELD® SHIPPING INSURANCE

## Technical Implementation Reference Guide

upscCustomerID	String <b>Required</b> Indicates Franchise Identifier assigned by UPS Capital ex: XXX
----------------	--

quoteShipmentInfo	<b>ShipmentInfo</b> { <ul style="list-style-type: none"> <li>shipperId                   String <b>Required</b> Indicates Customer shipper identifier. Value should be unique for each shipper account.</li> <li>shipperName               String Indicates Customer shipper name.</li> <li>carrier                    String Indicates transportation carrier.</li> <li>shipDate                   string(\$date) <b>Required</b> Indicates package shipment date. Fmt: YYYY-MM-DD Eg: "2017-10-20"</li> <li>bol                         String <b>Required</b> Indicates Bill of Lading number for the shipment</li> <li>insuredValue              number(\$double) <b>Required</b> Indicates Insured Value of the shipment</li> <li>commodityCodeType       String Indicates type of the Commodity Code that is being shipped ex: UPSC</li> <li>commodityCode            String <b>Required</b> Indicates numeric commodity code of item in the shipment</li> <li>oversize                  Boolean <b>Required</b> Indicates if the shipment package is over normal size limits. Y or N</li> <li>usedGoods                 Boolean <b>Required</b> Indicates if the shipment content is new or used goods N or U</li> <li>modeOfTransport         String <b>Required</b> Indicates the Mode of Transportation. 1 - Air 2 - Ground 3 - Ocean</li> </ul>
-------------------	--

consigneeName	String	Indicates the Name of Consignee
description	String	Indicates detailed information of the shipment goods
shipmentType	Int <b>Required</b>	Indicates the type of shipment the quote is for 1- FTL/FCL

		2- LTL/LCL
		3- Small Package
		4- Ground Freight Pricing
		5- Ocean
		6- Air
		7- Mail or Parcel Post
	}	
destinationAddress	<b>address</b> {	address1 String <b>Required</b>
		address2 String
		city String <b>Required</b>
		state String <b>Required</b>
		postalCode String <b>Required</b>
		countryCode String <b>Required</b>
	}	
		Indicates the package destination address/location to where the insured package is shipped
originAddress	<b>address</b> {	address1 String <b>Required</b>
		address2 String
		city String <b>Required</b>
		state String <b>Required</b>
		postalCode String <b>Required</b>
		countryCode String <b>Required</b>

# INSURESHIELD® SHIPPING INSURANCE

## Technical Implementation Reference Guide

```

payablesAttentionTo  String
                    Required
                    Indicates the shipper payable information, usually used
                    for claims payment

payablesAddress      address{
                    address1  String  Required
                    address2  String

                    city      String  Required

                    state      String  Required

                    postalCode String  Required
                    countryCode String Required }
                    Indicates the shipper payables address information,
                    usually used for claims payment

shipperPrincipal     String
                    Required
                    Indicates Shipper's Name that will be used for Office
                    of Foreign Assets Control (OFAC) screening

```

```

shipperAddress       address{
                    address1  String  Required
                    address2  String
                    city      String  Required
                    state      String  Required
                    postalCode String  Required
                    countryCode String  Required
                    }

status               String
                    Indicates status of the Package that is being insured by
                    the Channel Partner

                    ShipmentStatus
                    Enum:
                    [ UNCONFIRMED, CONFIRMED, VOID ]
                    For Create Quote request, "UNCONFIRMED" is the only
                    value allowed.
}

```

### Example:

```

    }  
  ]  
}
```

### 2.2. Purchase Coverage

Customer's request for purchasing a previously requested insurance quote by providing the necessary shipment and quote information.

**Post <https://upscapi.ams1907.com/apis/list/coverage/v1>**

This method places an order for purchasing a previously requested insurance quote.

#### Request

##### Request Parameters

**body \* (required)**

InsurancePurchase object needs to be sent to the API as a request payload...

##### Request

##### Request Headers

**Content Type :** application/json

**Bearer :** < secure token issued by API integration team >

##### Model :

##### InsurancePurchase

```
{
  QuoteId      String ($UUID)
                Required
                Indicates the UPSC QuoteId(from Quote Response) by UPS
                Capita corresponding customer requested quote.
  productId    String
                Required
                Same as in the original quote request
  partnerId    String
                Required
                Same as in the original quote request
  upscCustomerID String
                Required
                Same as in the original quote request
  locationID   String
                Required
                Same as in the original quote request
}
```

### Example:

```
{

}
}
```

### 2.3. Confirm Shipment

Customer's request for confirming shipment (after being picked up by a transportation carrier) for which insurance coverage was previously purchased by providing the necessary coverage information.

#### Post

<https://upscapi.ams1907.com/apis/list/shipment/v1>

This method places the insured shipment picked up by the carrier in a confirmed status and eligible for future claim requests.

#### Request

##### Request Parameters

**body** \* (required)

Quote object needs to be sent to the API as a request payload...

##### Request Headers

**Content Type** : application/json

**Bearer** : < secure token issued by API integration team >

Model :

Purchase Coverage

  status       String
               Required
               Indicates current status of the Package that is being insured by
               the Channel Partner. Shipment status must be confirmed before
               continuing with purchase.

  ShipmentStatus
  Enum:
  [ UNCONFIRMED, CONFIRMED, VOID ]
  For Confirm Shipment request, "CONFIRMED" & "VOID" are the only
  value allowed.
  - UNCONFIRMED status can change to CONFIRMED or VOID.
  - CONFIRMED status can change to VOID if within 180 minutes
  of status being CONFIRMED.
  - VOID status cannot be changed. To purchase valid coverage,
  one need to start over by submitting a new create quote
  request again.
}

```

**Example:**

```

{
  "quoteId": "a820d5c29bb743d698b78c0286677288",
  "productId": "1",
  "partnerId": "XXX001",
  "transactionID": "MayTest12",
  "status": "Confirmed"
}

```

### Response

Response content type :	
application/json	
Code	Description
200	<p><b>Successful Operation</b></p> <p>Same as Quotes Response</p>

<p><b>400</b></p>	<p><b>Invalid payload format</b></p> <pre> <b>ApiResponseFault</b>{ code   integer(\$int32)   message      string    description  string    errors       [errors{ code                                 field      string                                 message    string                               }] } </pre>
<p><b>401</b></p>	<p><b>Invalid payload data</b></p> <pre> <b>ApiResponseFault</b>{ code   integer(\$int32)   message      string    description  string    errors       [errors{ code                                 field      string                                 message    string                               }] } </pre>
<p><b>Example:</b></p>

# Error Messages

### 3.1 Error Messages Matrix

API	Scenario	Error Code	Error Messages
Get Pricing	Product ID field is missing	400	Product Id missing
Get Pricing	Invalid Partner ID	401	The Token issued is not valid.
Get Pricing	Ship Date field is missing	400	Ship Date missing
Get Pricing	Commodity Code is missing	400	CommodityCode missing
Get Pricing	Over Size field is missing	400	Oversized information missing
Create Quote	Product ID field is missing	400	Error.Product.Id.Invalid.or.Null
Create Quote	Invalid Product ID	400	Error.Invalid.Product.Id
Create Quote	Location ID field is missing	400	Error.Location.Id.Invalid.or.Null
Create Quote	Location ID is invalid	400	Error.Location.Id.Invalid.or.Nul
Create Quote	Shipper Principle is missing or invalid	400	Error.Shipper.Principal.Invalid.or.Null
Create Quote	Payable Attention to is missing or invalid	400	Error.Payables.Attention.To.Invalid.or.Null
Create Quote	Partner ID field is missing	401	The Token issued is not valid.
Create Quote	Partner ID field is Invalid	400	Error.Partner.Id.Invalid.or.Null
Create Quote	UPSC Customer ID is invalid or NULL	400	Error.UPSC.Customer.Id.Invalid.or.Null
Create Quote	Transaction ID is Invalid or Null	400	Error.Transaction.Invalid.or.Null
Create Quote	Status is Invalid or Null	400	Error.Status.Invalid.or.Null
Create Quote	Shipper ID is Invalid or NULL	400	Error.Shipper.Id.Invalid
Create Quote	Shipper Name is Invalid	400	Error.Shipper.Name.Invalid
Create Quote	Carrier is Invalid	400	Error.Carrier.Invalid
Create Quote	BOL is invalid	400	Error.Bol.Invalid
Create Quote	Insured Value is Invalid	400	Error.Invalid.Insurance.Value
Create Quote	Insured Value is NULL	400	Error.Location.Id.Invalid.or.Null
Create Quote	Commodity Code is Invalid or NULL	400	Error.Commodity.Code.Invalid.or.Null
		400	Error.Oversize.Flag.Invalid.or.Null
Create Quote	Used or Oversize Field is Invalid or Null	400	Error.Used.Goods.Invalid.or.Null
